

Data Sheet

Warehouse Extension, New Milton

A warehouse extension presented no problems to Reside Construction Ltd when contracted to expand the premises of precision engineering components manufacturer, RHH Franks in New Milton.

The new warehouse had to tie in exactly with the existing facilities and was constructed whilst not impeding on the Client's business activities. A new steel frame and cladding system that matched the existing facades was erected along with industrial doors and a mezzanine level storage area, providing much needed operational space.

The £500,000 project was completed in June 2020 and administered under a JCT Intermediate Contract with Contractor's Design.
